Pitched against Farmers and Carmichael Honorary Mayor sash for Merchant Bank lender Analisa Alvarado, DeLancey's campaign raised more than \$8400. The cash will be split between the Chamber and How 2 Love our Cops; a nonprofit formed to help law officers in times of hardship. Alvarado's rival campaign brought in more than \$3000. Half of this sum will assist held major distribution rights for the the Carmichael Parks Foundation. "Supporting How 2 Love our Cops really made an impact on my life," says DeLancey. "I want to keep bringing community awareness to the cause. Law officers are not just people in uniform. They're our neighbors and friends. They deserve as much loyalty back from us as they give to

our community."

Valley Fever Cases in California **Remain High**

By Corey Egel, CDPH

SACRAMENTO REGION, CA (MPG) - The California Department of Public Health (CDPH), in collaboration with local health departments, is reminding the public and healthcare providers that Valley fever cases typically peak in the fall.

Since 2014, there has been a steady increase in the number of Valley fever cases in California. In 2018, more than 7,500 Valley fever cases were confirmed, and early case counts for 2019 indicate that Valley fever activity remains high. As of November 19, over 7,000 likely cases have been reported. Incidence is particularly high in the Central Valley and Central Coast regions of California, including Kern, San Luis Obispo, Kings, Fresno, Tulare, Monterey, and Merced counties.

"People who live, work, or travel in areas where Valley fever is common are at higher risk of getting infected, especially if they work outdoors or participate in activities where soil is disturbed," said Dr. Sonia Angell, State Public Health Officer and CDPH Director. "If you have symptoms that include cough, fever, or difficulty breathing for more than a week, we encourage you to talk to a healthcare provider." A person can help reduce the risk of infection by avoiding breathing in dirt or dust in areas where Valley fever is common. In these areas, when it is windy outside and the air is dusty, stay inside and keep windows and doors closed. While driving, keep car windows closed and use recirculating air conditioning, if available. If individuals must be outdoors, they should consider wearing a properly fitted mask (such as an N95 respirator mask) when the air is dusty, and avoid disturbing the soil whenever possible. Valley fever, also known as coccidioidomycosis, or "cocci", is caused by breathing in the spores of a fungus that grows in the soil and dirt in certain areas of California. The fungal spores, which are too small to see, can be present in dust that gets into the air when it is windy or when soil is disturbed, such as through digging during construction. This fungus usually infects the lungs and can cause respiratory symptoms including cough, fever, chest pain, and tiredness. In most people, the infection will go away on its own, but anyone who has these symptoms for more than a week should see a doctor or healthcare provider.

Valley Fever Cases in CA Remain High

Continued from page 1

While anyone can get Valley fever, those most at-risk for severe disease include people 60 years or older, people who are African American or Filipino, pregnant women, and people with diabetes or conditions that weaken the immune system.

Employers with employees working outdoors should train workers about Valley fever symptoms and take steps to limit workers' exposure to dust, such as watering down soil before digging.

The State of California is taking action to

raise awareness about Valley fever by allocating \$2 million in the 2018-2019 budget to plan, develop, launch and evaluate a Valley Fever Awareness campaign that CDPH will launch in the coming months. Governor Gavin Newsom has also approved a bill to require construction employers engaging in specific work activities in counties where Valley fever is endemic to provide awareness training about Valley fever to their employees.

Are you in compliance? EPA Rule Requires Dental Practices to Install Amalgam Separators and Submit a Compliance Form by October 12, 2020

The Environmental Protection Agency (EPA) recently issued technology-based pretreatment standards under the Clean Water Act to reduce discharges of mercury from dental offices into municipal sewage treatment plants.

The Dental Office Effluent Guidelines became effective July 14, 2017. This final rule requires dental offices install amalgam separators and two best management practices. Dental offices that place or remove amalgam:

- · Must install, operate, and maintain an amalgam separator
- Must not discharge scrap amalgam into the sewer
- · Must not use certain kinds of line cleaners, such as bleach

Existing dental dischargers must comply and submit a form to Regional San (see links below) by October 12, 2020. New dental discharges or ownership transfers must comply within 90 days of their first discharge. If any dental practices already had amalgam separators prior to June 14, 2017, they have until June 14, 2027, to replace them with compliant separators. Dentists who never place amalgam or remove amalgam in limited or unplanned circumstances are exempt.

Who is affected by this new rule?

This rule applies to offices, including large institutions such as dental schools and clinics, where dentistry is practiced that discharge to a municipal sewage treatment facility. It does not apply to mobile units or offices where the practice of dentistry consists only of oral pathology, oral and maxillofacial radiology, oral and maxillofacial surgery, orthodontics, periodontics, or prosthodontics.

Why are these standards necessary?

When dentists remove old amalgam fillings from cavities or place a new filling, mercury in the form of dental amalgam enters the wastewater of the dental office. Mercury from waste amalgam can make its way into the environment from the treatment plant through the land application of sludge or through surface water discharge to the Sacramento River. Mercury is a potent neurotoxin that can have a wide range of health effects. Once released into the aquatic environment, certain bacteria can change mercury into methylmercury, a highly toxic form of mercury that bioaccumulates in fish and shellfish. Eating fish and shellfish is the main source of people's exposure to methylmercury in the U.S.

Dear Dave,

I'm 23, debt-free, and I've almost got my fullyfunded emergency fund in place. I was curious about your thoughts on saving up money to buy a duplex, living on one side, and renting out the other. It would be my first home purchase, and my first rental property. - Derrick

Socialist Price Controls Will Harm American Patients

Commentary by Sally C. Pipes

The Trump administration is planning one of the biggest changes to Medicare in decades.

The draft rule would effectively bring socialist drug price controls to the United States. The change would threaten patients' health and discourage companies from funding experimental treatments for deadly diseases.

Medicare Part B, which covers drugs administered via shots and IV drips in hospitals and doctor's offices. Most cancer treatments, for instance, are risky. It can take decades covered through Part B.

Part B drugs cost more in America than in countries like Canada and the United Kingdom, which impose strict price controls on prescription drugs. If bureaucratic agencies such as Canada's Patented Medicine Prices Review Board – deem a drug too expensive, they refuse to cover it.

Apparently, the Trump administration thinks these countries have the right idea. Officials believe that tying Medicare reimbursements to the average prices paid for drugs in a handful of foreign countries, where price controls are common, The rule impacts would reduce Part B drug

spending.

Americans have little to gain and much to lose from statist price controls.

Drug development is and cost a staggering \$2.9 billion to develop a new medicine. Most experimental drugs never even make it out of the lab. Manufacturers fund future research with the revenue from just a handful of successful products.

The rule would make drug development far less appealing. If the potential return on investment were capped, companies would have little reason to spend billions trying to develop new medicines.

History shows us what happens to drug development when price controls are employed. Europe was a hotbed of drug innovation in the 1970s, producing sallypipes.

Price controls may yield some short-term savings, but they would cost patients dearly in the long run.
