**WELCOME BACK TO SCHOOL**

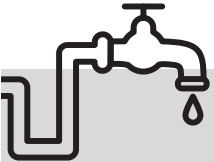

Storm water is untreated run-off from rain, snow, and sleet that goes directly to our local storm drain system and surface waterways. The City of Holladay must manage storm water to protect the health and safety of our community as well as stay in compliance with laws and regulations.

Currently, Holladay has at least \$18 million in deferred storm water projects that must compete for funds in the City budget against fire and police services, roads, and other critical items. The City is considering a new storm water utility fee to establish a Storm Water Enterprise Fund that would provide a sustainable, dedicated funding source to address storm water needs. Nearly all cities in Utah have a storm water utility fee in place, and Holladay is one of the last remaining cities without the fee in Salt Lake County. Millcreek just adopted a fee in June 2020.

The City engaged a financial advisory consultant - Lewis Young Robertson Burningham Inc (LYRB) - to conduct a storm water utility study, evaluate methods to fund the storm water program, and calculate a potential storm drain utility fee structure. The Holladay@20 Preparing for Tomorrow Citizen Advisory Group also worked with LYRB and recommended the City Council adopt the fee.

This process is just kicking off and will continue through Fall 2021. See the project website for the study presentation, more information, and project updates.
